The *Postgraduate Medical Journal* is published on behalf of the Fellowship of Postgraduate Medicine by Macmillan Press Ltd.

**Scope** *Postgraduate Medical Journal* publishes original papers on subjects of current clinical importance. Each issue contains commissioned reviews and leading articles but unsolicited submissions are also welcome. Each issue also includes 'Letters to the Editor', book reviews and an international postgraduate diary. Many issues contain papers or abstracts of symposia devoted to a single subject, and the full proceedings of meetings are published as supplements to the Journal. The Journal, as the organ of the Fellowship of Postgraduate Medicine, is dedicated to advancing the understanding and practice of postgraduate medical education and training.

The Fellowship of Postgraduate Medicine was founded after the First World War and was a pioneer in the United Kingdom in the development of programmes of postgraduate study in all branches of medicine (see *Postgrad Med J* 61, 1). It always has been, and remains, independent of University, Health Service and Government. Currently the Fellowship works closely with the National Association of Clinical Tutors in furthering mutual aims. Amongst other activities, the Fellowship provides research grants and support for young investigators especially those working temporarily in the UK.

Further details of the Fellowship of Postgraduate Medicine can be obtained from The Executive Secretary, The Fellowship of Postgraduate Medicine, 12 Chandos Street, London W1M 9DE.

The Journal is covered by Current Contents, Biological Abstracts, ASCA, ISI/BIOMED, Index Medicus, Excerpta Medica and Science Citation Index.

Notice to Contributors

The *Postgraduate Medical Journal* considers manuscripts prepared in accordance with the guidelines laid down by the International Committee of Medical Journal Editors (Br Med J 1988, 296: 401–405). All material submitted is assumed to be submitted exclusively to the *Postgraduate Medical Journal* unless the contrary is stated.

**Typescripts** Two complete copies should be sent to the Editor, Postgraduate Medical Journal, 12 Chandos Street, London W1M 9DE. Papers must be typewritten, double-spaced, on one side of paper not larger than A4 (297 mm × 210 mm), with a 5 cm margin. The first page of the typescript should bear the names of the author(s) and the name and address of the laboratory or institution where the work has been carried out, in addition to the title of the paper. The full address and fax number of the principal author to whom proofs will be sent should be given as a footnote, as should any permanent changes of address and/or appointment. A short (running) title of not more than 45 characters should be given. All pages should be numbered including the title page. In line with many other journals, we do not normally return rejected manuscripts.

**The principal author** must ensure that any co-authors listed agree to submission of the typescript. Any written or illustrative material which has been or will be published elsewhere must be duly acknowledged and accompanied by the written consent of the authors and publishers concerned.

**Arrangement** Papers should be divided into; (a) Title page, (b) Summary, (c) Introduction, (d) Materials and methods, (e) Results, (f) Discussion, (g) Acknowledgements, (h) References, (i) Tables, (j) Figures and captions. The summary should not exceed 250 words and should state concisely what was done, the main findings and how the work was interpreted. In all sections of the paper numbered paragraphs should be avoided if at all possible.

**Style** Abbreviations and symbols must be standard and SI units used throughout. Acronyms should be used sparingly and must be fully explained when first used. Whenever possible drugs should be given their approved generic name. Where a proprietary (brand) name must be used, it should begin with a capital letter. Statistical analyses must explain the methods used. The use of footnotes is not permitted. Single quotation marks should be used and words to be italicized should be underlined. The *Concise Oxford English Dictionary* is used as a reference for all spelling and hyphenation.

**References** should follow the Vancouver format. In the text, they should appear as numbers starting at 1. At the end of the paper they should be listed (double-spaced) in numerical order corresponding to the order of citation in the text. All authors should be quoted for papers with up to six authors; for papers with more than six authors, the first three only should be quoted followed by *et al.* Abbreviations for titles of medical periodicals should conform to those used in the latest edition of *Index Medicus*. The first and last page numbers for each reference should be provided. Abstracts and letters must be identified as such.

**Figures** In the text Arabic numbers should be used and all illustrations should be specifically referred to in the text, e.g. (Figure 2). All illustrations should be submitted at about 1½ times the intended final size and should be numbered as figures whether they are photographs, representational drawings or line diagrams and graphs.

**Photographs** and **photomicrographs** should be unmounted glossy prints and should not be retouched, and should be chosen to exclude technical artefacts. Magnification is best indicated by a line representing a defined length included within the photographs. Areas of key interest and/or critical reproduction should be indicated on a flimsy overlay attached to the photograph or on a photocopy. All annotations and lettering should be indicated in the same way, and preferably not included on the original print. Clearly contrasted and focused prints are essential for adequate reproduction.

**Line diagrams and graphs** should be on separate sheets; they must be drawn with black Indian ink on white paper, or supplied as photographic prints of such originals. Lettering on figures should be minimal and must not duplicate the legend. The use of symbols should be consistent within papers, and explanations of symbols should be included in the caption, not on the figure.

**A photocopy** of all illustrations should be submitted.

**Tables** These should be as few as possible and should present only essential data. They should be typewritten on separate sheets, have a title or caption, and given Roman numbers.

**Proofs** Two marked copies of the proofs will be sent to the principal author which should be read carefully for errors. One corrected copy must be returned to the editor within 3 days. Major alterations to the text cannot be accepted.

**Copyright assignment** The principal author must complete and return to the Publisher the Copyright Assignment Form enclosed with the proofs.

**Offprints** A copy of the journal will be sent to the principal author. Offprints may be ordered on the form accompanying proofs. The charges are necessarily higher if orders are received after the issue has gone to press.

**Drug side effects** Manuscripts reporting adverse drug reactions should be accompanied by evidence showing that the reaction has been reported on a 'yellow card' or to the appropriate drug licensing authority, and to the drug manufacturer.
