Vol. X. No.106.  
(New Series)

AUGUST, 1934.

Monthly. Price 2s. net.

“THE Role of Metals in Intracellular Reactions”, an 80 page book, contains an authoritatively written and interesting account of modern views on the nutritional requirements of the body, together with particular references to current work in connection with certain metals, which, it is becoming increasingly recognised, are essential, in minimal amount, for the optimum efficiency of the metabolic activities proceeding within the cells.

It is suggested that physicians will find this book informative and interesting.

Halmagon Tablets have been issued as a result of the newer conceptions of this current research work, and are an entirely new addition to the therapeutic weapons available to the physician. In the presentation of the constituents in tablet form great difficulties of production have been overcome, and Halmagon Tablets represent in high degree the art of the pharmaceutical chemist. Halmagon Emulsion for Intramuscular Injection is also available.

Halmagon has several interesting special indications apart from its general action, and it is offered for clinical trial in these conditions.

The attention of physicians is drawn to the postage-paid card contained in each copy of the above-mentioned book, on receipt of which the manufacturers will forward a full clinical trial supply of Halmagon Tablets. Physicians who do not possess a copy of “The Role of Metals in Intracellular Reactions” may obtain it post free on request.
