*"The Little More
and how much it is!"*

Probe every path! When in doubt check your diagnosis by a routine examination of the Fundus with the

EMESAY REFLEXLESS OPHTHALMOSCOPE

This new instrument entirely eliminates any corneal reflex thus ensuring a perfect picture EVEN THROUGH A SMALL PUPIL. The G.P. by such routine can often establish the existence of disease before other symptoms become manifest. This new ophthalmoscope allows such an examination even at the bedside of recumbent patients.

AUSTRALIAN DRIED FRUITS

MAY CONFIDENTLY BE RECOMMENDED AS

WHOLESOME, APPETISING, SUSTAINING FOOD!

Australian Sultanas and Currants are notable for their goodness and nourishing qualities. They are rich in fruit sugar, and contain mineral constituents of a valuable character.

These fruits are simply sweet toothsome grapes, ripened and dried in vitalising sunshine, and packed in a scientific and hygienic manner. They retain the healthful qualities of the grape, and are free from injurious chemicals.

We bring these Australian fruits to your notice because they are good food, deserving of the most widespread use.

There is, of course, the further consideration that the use of Australian products provides a living for British settlers, and if extended would enable the Commonwealth to take more British migrants, thus relieving unemployment and taxation here at Home.

We would appreciate your help in this important matter.

SCIENTIFIC ENZYME DIGESTION

Peptalac

REGD.
THE INSTANT PREDIGESTED MILK DIET

SIX OUTSTANDING ADVANTAGES

- 1 PEPTALAC is "made in a minute" by the simple addition of hot water giving in an instant a digested milk food of high digestibility.
- 2 PEPTALAC is fool-proof and requires neither technique, skill nor addition of milk. It renders obsolete the method of peptonisation wherein milk had to be held at a temperature 117°F. for 20-30 minutes under carefully controlled conditions.
- 3 PEPTALAC is guaranteed to have been pancreatised and the essential components of starch and milk proteins broken down to sugars, peptones, and amino-acids. With other methods of peptonisation this cleavage is uncertain and unreliable and the milk which is added is not predigested.
- 4 PEPTALAC is a safe and practically sterile powder. In the old methods of peptonisation, the milk was predigested at a temperature which is also favourable to the growth of organisms, thus resulting in a final product teeming with bacteria. Reconstituted PEPTALAC is free from pathogenic organisms and practically sterile.
- 5 PEPTALAC is therefore invaluable for infants, young children, the aged, convalescents, and the weak in health, who are prone to contract milk-borne diseases from ordinary milk or preparations made with it.
- 6 PEPTALAC is pleasing to the most fastidious palates—salt or chocolate may be added for further flavouring if desired.
