THE NATURE AND TREATMENT OF ASTHMA, HAY FEVER AND MIGRAINE.

By ALEXR. GUNN AULD, M.D. H. K. Lewis.
1936. Price 12/6.

Auld's clinical studies, extending from 1885 until the present day, have been collected together, re-edited by himself, and published in monograph form. The subjects chosen are set out in thirty-two chapters, comprising three main groups—

allergy, diseases of the chest, and the functions and diseases of the kidney. His original investigations into the nature and treatment of asthma, hay fever and migraine had appeared in the British Medical Journal and Lancet from 1908 onwards, and form a very important and interesting sequence. In fact, the first half of the book records the story of "peptone," and its vicissitudes in war and peace. Throughout the book, one notes the stamp of a sound clinician, a competent observer, a keen research worker and a clear writer.

Miscellaneous.

This Section deals with New Drugs, Preparations, Surgical Instruments, etc. The description of each article is supplied by the Producer. Particulars regarding insertions, which are free of cost, may be obtained from the Business Manager, Fellowship of Medicine and Post-Graduate Journal, 519, Grand Buildings, W.C.2.

Glaxo Laboratories Ltd. are introducing to the medical profession a new parenteral preparation that is the purest and most highly concentrated liver extract ever achieved on a manufacturing scale.

Each 2 cc. ampoule of the new product—Examen—will contain, in an average of only 10-15 milligrammes of solids, the hæmopoietic factor extracted from 100 grams of fresh liver. Examen Liver Extract is, in fact, the preparation to which the Scandinavian writers Laland and Klem referred in their letter to *The Lancet*, 1937, i, 171. It offers a very great advance in the parenteral treatment of pernicious and other macrocytic anæmias.

The initial dose of Examen in relapse is small (4 cc.); for maintenance the dose is smaller still (2 cc.) and this is given at infrequent intervals (every 3—5 weeks)—a dosage scheme known by repeated clinical trials to be *more than sufficient* in the majority of cases.

Patients submit themselves readily to Examen treatment, because it throws no strain upon their endurance or discipline. Moreover, Examen is painless on injection and does not provoke allergic reaction. In emergency use its exceptional purity permits of intravenous injection with safety.

Examen was subjected to extensive preliminary clinical trials before its release was permitted and its uniformity is confirmed by further trials upon *every* individual batch of the product before issue.

Examen is supplied in boxes of three 2 cc. ampoules at 13/4d., and in boxes of six at 25/-, less the usual professional discount.

"Benerva" synthetic vitamin B₁ is now available for oral administration in the form of small convenient tablets, each containing 1 mg. of pure crystalline aneurin (approx. 500 international vitamin B₁ units).

Although the strength of "Benerva" 1 c.c. ampoules has been increased to 2 mg. per ampoule (approx. 1,000 international units) *i.e.* to practically twice the strength of the former ampoules, the price remains unaltered.

"Benerva" oral tablets are issued in bottles of 20 and 100, and "Benerva" ampoules are supplied in boxes of 6, 12, and 50.
