include nephrosclerosis, pernicious anæmia, dyspituitarism, diabetes, tuberculosis and many others. The case histories supplemented by photographs and X-ray reproductions include confirmatory reports from the grateful patients: but in addition objective proofs of recovery are given such as reduction of blood pressure, increase of hæmoglobin and red cells and in one case enormous improvement in cataract of each eye with increase of vision from 6/24 (R) and 6/12 (L) to 6/6 in each eye. The third chapter is concerned with the effect of the extract on premature senility of any particular system in the body while the last is concerned with the importance of the extract in the prevention of carcinoma.

Sufficient has been said to indicate the important claims made for this form of treatment which apparently has special influence on that popular member of the endocrine orchestra, the pituitary. One would like to hear of the experiences of other physicians with this method of stimulating the *vis medicatrix naturæ*. Although in places the style is difficult, the author puts his case well and succeeds in stimulating the mental processes of the reader.

A TEXT-BOOK of OPHTHALMIC OPERATIONS.

By HAROLD GRIMSDALE, M.B., F.R.C.S. and ELMORE BREWERTON, F.R.C.S. Baillière, Tindall & Cox. 1937. Price 17/6.

In this, the third edition, of perhaps the most widely known English book on Ophthalmic Operations, the authors have excised much that held interest only in the development of the operative surgery of a specialized branch. Standard operations long in general use are clearly described with excellent illustrations. Even now the book contains descriptions of operative modifications seldom used, although possibly necessary from an examination point of view.

Modern operative advances, especially for detachment of the retina, are described although not in the same detail as with many older operations. So large a literature has been built up around this specialized work that the student can hardly expect to find the subject fully described in a text-book of this size. The bibliography, however, is full and should be sufficient for a reader wishing further to pursue any of the modern lines rather briefly touched upon.

Forthcoming Medical Books.

H. K. LEWIS & CO. Ltd.
136, Gower Street, London, W.C.1.

"*A Guide to Veterinary Parasitology for Veterinary Students and Practitioners*," by T. Southwell, D.Sc., Ph.D., and A. Kirshner, M.B., Ch.B. With 88 illustrations and 12 diagrams. Demy 8vo. Price 7s. 6d. net.
