

COAL—TAR

E.S.T.P. - *the improved*
 BRAND (MARTINDALE) *Tar Preparation*
Ether Soluble Tar Paste

**Purified, decolorised, non-staining
 aromatic, maximum tar effect**

A smooth paste, easily applied. The tar component retains the essential phenolic compounds unimpaired, ensuring powerful antiseptic action. All indications for Tar Treatment are indications for "E.S.T.P." (Martindale), more especially infantile eczema; eczemata generally, subacute, acute, chronic, moist and dry, with their multiform lesions; impetigo complicating occupational eczemata; prurigo; pruritus; psoriasis; pityriasis circinata; lichen planus. In 2-oz. & 16-oz. jars.

A professional sample and descriptive brochure will gladly be sent on written request to the address below, or telephone message to Stamford Hill 3456 (Ext. 2)

PYE'S SURGICAL HANDICRAFT
14th Edition

Edited by HAMILTON BAILEY. John Wright & Sons, Ltd., Bristol, 1944. Price 25s.

Mr. Hamilton Bailey is to be congratulated on editing so ably the 14th edition of *Pye's Surgical Handicraft*, which has been such an outstanding favourite with house officers and practitioners for a period of over sixty years. Mr. Bailey has been the editor of this work since 1938, when he succeeded the late Mr. H. W. Carson.

This is by far the best edition we have seen of this work, and all the 45 collaborators have contributed articles of unquestionable merit. In particular we would cite those by Mr. Watson Jones, Mr. Holmes Sellors, and the editor himself.

Perhaps in a future edition a special chapter devoted to penicillin will be included.

The book is a very serviceable house-surgeon's manual, and is, in our opinion, excellent as a general work of reference.

INFRA-RED THERAPY

EVER since Hippocratis, physicians have used measures to promote hyperaemia around injuries and infective foci, with sound healing instinct. In modern medicine hyperaemia therapy by infra-red irradiation proves efficacious in a great variety of conditions, from inflamed ears to sprained ankles, from carbuncles to rheumatic joints. "After nearly forty years' personal experience" (writes a famous London consultant), "were I limited to one method in physical medicine that one method would be infra-red irradiation."

In our handbook "*Pre-eminent in the Relief of Pain*" you will find a comprehensive summary of indications, technique, physical data, etc., for infra-red therapy with the Hanovia Sollux lamp. Actual excerpts from over 100 books and papers, covering general and specialised medicine, are reproduced, properly classified, indexed, easily readable. The handbook is free to professional enquirers.
