

in Staphylococcal Infection

QUINOLOR SQUIBB

*A unique
antiseptic agent*

MADE IN ENGLAND
In jars of 1 oz. and 16 oz.

Samples and Literature on
request.

An ointment of proved value in staphylococcal infection, particularly good results are to be obtained in sycosis barbae, sycosis vulgaris and tinea sycosis. "Quinolor" possesses noteworthy qualities for promoting tissue repair and affords an excellent dressing for cutaneous affections and superficial lesions. The antiseptic action continues over a considerable period of time, although the advantages associated with frequent dressings should not be overlooked. "Quinolor" Compound Ointment is applied to the affected area following a thorough cleansing of the wound. Impetigo Contagiosa is among other dermatological conditions which have frequently responded very favourably to "Quinolor" therapy.

POST-GRADUATE MEDICAL JOURNAL

War-time Subscription for Members of His Majesty's Forces

During the war members of the medical profession serving with H.M. Forces may subscribe to the Journal at the annual rate of 12/—, post free.

This concession applies also to present Members and Associates of the Fellowship of Medicine who are now in the Forces, and the Fellowship is prepared to adjust any subscription paid since the outbreak of hostilities on hearing from those concerned.

(Subscribers at this special rate are not entitled to pay the lower fees, quoted to Members and Associates, for attendance at Courses of Instruction.)

Application should be made to the

FELLOWSHIP OF POSTGRADUATE MEDICINE, 1, Wimpole Street, London, W.1.

RUTHIN CASTLE, NORTH WALES

A Clinic for the diagnosis and treatment of Internal Diseases (except Mental or Infectious Diseases). The Clinic is provided with a staff of doctors, technicians and nurses.

The surroundings are beautiful. The climate is mild. There is central heating throughout. The annual rainfall is 30.5 inches, that is, less than the average for England.

The inclusive fees are from 15 guineas a week, according to the room occupied; rooms with bathroom are from 21 guineas. An examination and consultation fee of 15 guineas is charged on the first visit only.

SPECIAL FEES FOR INVESTIGATION ONLY—30 GUINEAS, including stay up to 10 days and report to doctor.

For particulars apply to THE SECRETARY, Ruthin Castle, North Wales.

Telegrams: Castle, Ruthin.

Telephone: Ruthin 66

FOCUSSED
ULTRA-
VIOLET

with

HANOVIA'S NEW
KROMAYER
LAMP

The first clinical use of ultra-violet rays was in topical applications, and to-day focal actinotherapy finds ever-widening use with the new high-power, self-starting SK 200 burner fitted to the classical Kromayer Lamp. This latest Model VI is simplified to a very compact and economical unit, utilising tap-cooling, which gives the operator every facility for producing regenerative focal reactions speedily and conveniently anywhere on the skin or the accessible tissues and membranes.

We shall be glad to send full descriptions on request (please enclose 1d. stamp to comply with paper regulations).

THE
KROMAYER
LAMP
MODEL VI

SOME CLINICAL USES OF THE KROMAYER LAMP

Injuries: Industrial, gunshot, or operation wounds heal rapidly under graduated local irradiations. 'A bewildering variety of open sinuses seem to be favourably affected by ultra-violet radiation.'

Nose and Throat: In chronic catarrh or rhinitis the Kromayer Lamp with a nasal applicator assists greatly in restoring healthy conditions in the nasal membranes. Many hay-fever cases remain symptom-free after such applications. Throat carriers of diplococci or streptococci often clear up after topical irradiation combined with other measures.

G.U.: The Kromayer Lamp works equally well for all types of acute epididymitis; tubercular, gonorrhoeal or traumatic. Other indications include: prostatitis, orchitis, chancroid and adenitis.

Skin: All dermatologists know the Kromayer Lamp.
