In the treatment of unproductive cough in children and adults the advantages of ETHNINE lie in its effectiveness with low toxicity, and its freedom from side-effects such as constipation and digestive upset.

For children, ETHNINE is indicated whenever a cough sedative is considered advisable particularly in the treatment of whooping cough, irritation of the upper respiratory tract, and the cough associated with enlarged tonsils and adenoids before surgical measures are taken.

The sedative action of ETHNINE is particularly useful when it is desired to ensure a restful night's sleep uninterrupted by paroxysms of coughing.

Lifelessness

APATHY or lifelessness are symptoms commonly observed in debility states but despite clinical tests, the cause often remains obscure. These are the circumstances in which the possibility of conditioned B-avitaminosis may be considered.

A preparation containing all B-Complex factors, 'BEPLEX' will speedily resolve doubts on the vitamin aetiology of symptoms, and restore any deficiencies that have arisen.

The importance of the emotional background in the aetiology of peptic ulcer is widely recognised. Further confirmation is provided by the increase of gastric acidity shown to follow certain emotional disturbances such as those involving resentment and hostility.

Protection of the ulcer from the corrosive action of gastric juice is an essential condition of successful healing entirely fulfilled by 'Aludrox' Amphoteric Gel.

'Aludrox' buffers gastric acid to a pH of 3.5 to 4.0, at which level healing may proceed and the risk of alkalosis is avoided. Normal digestion is unimpaired and, in addition, 'Aludrox' provides the physical protection of a gel barrier over the surface of the ulcer, thus ensuring a safer environment for the reparative processes.
