Journal of Immunogenetics

Edited by K. Bauer *Heidelberg*

The purpose of this new journal is to provide a medium for the rapid publication of research papers and review articles of high quality in the field of immunogenetics. Its scope includes the immunogenetics of antigens, such as proteins, histocompatibility and blood group antigens; of antibodies as well as the ontogenetic development and the evolution of immunoglobulins, the immune response and the complement system. Other topics will include the genetics of tolerance-induction and of membrane antigens of the immunocyte.
