

Another surgeon
is about to use one of
the world's finest
surgical blades....
....this happens
thousands of times
every day!

It happens because the blades are by Swann-Morton, the people who meet the highest requirements in surgical knives. We need say very little about our superiority. The world's surgeons have proved it for us!

Connective Tissue Diseases

G.R.V. Hughes M.D. M.R.C.P. 1977. 288 pages, 96 illustrations. Paper, £9.00

'Here is the prescribed book for those who complain of the lack of interest shown in the rheumatic and allied diseases. ... At the same time as new and fascinating clinical problems are explored and described, the text gives valuable and practical advice about diagnosis, investigation and treatment. If only all medical textbooks could reach this standard.'

The Practitioner

'Dr. Hughes, head of the department of rheumatology at Hammersmith Hospital, has written a book which emphasises the high standard and experience of that department. ... A copy should be in all rheumatology departments and medical libraries.'

The Lancet

Contents

Systemic lupus erythematosus
Sjögren's syndrome
Rheumatoid arthritis
Scleroderma
Polymyositis and dermatomyositis
Mixed connective tissue disease
Relapsing polychondritis
Polyarteritis nodosa
Wegener's granulomatosis
Takayasu's arteritis
Other vasculitides
Polymyalgia rheumatica and giant cell arteritis
Immune complex disease and the complement system
Immunological tests in the rheumatic diseases

The Quarterly Journal of Medicine

Official Organ of the Association for Physicians of Great Britain and Ireland

One of the leading medical journals published in the U.K. (Established 1907, New Series 1932). It covers the whole field of medicine but gives some emphasis to internal medicine. Its aim is to report advances in both diagnosis and treatment, and many of its papers are concerned with the development of growing points of current interest. The basic orientation is clinical, but the journal welcomes contributions with a patho-physiological approach. In the face of the present tendency to fragment the subject, *The Quarterly Journal of Medicine* attempts to provide general physicians with a synoptic view. Many of the contributions provide a desirable link between clinical and basic science. In addition to original papers, the journal also publishes occasional requested review articles on subjects of special interest.

Quarterly, 1978 prices: £22.00 (UK £17.50, US \$44.00) p.a.
Single issues, £6.00 (\$13.50)
