

Why leading surgeons all over the world prefer SWANN- MORTON scalpels

Swann-Morton have devoted years of experience and research to produce the superb surgical blades that are the choice of the world's leading surgeons.

All the nine universally accepted shapes are included in the range of Swann-Morton blades, and all of them are available in stainless or carbon steel.

The fine quality of Swann-Morton blades with their maximum uniformity, initial sharpness and durability, will continue to justify the preference of all the world's surgical teams.

Connective Tissue Diseases

G.R.V. Hughes M.D. M.R.C.P. 1977. 288 pages, 96 illustrations. Paper, £9.00

'Here is the prescribed book for those who complain of the lack of interest shown in the rheumatic and allied diseases. . . . At the same time as new and fascinating clinical problems are explored and described, the text gives valuable and practical advice about diagnosis, investigation and treatment. If only all medical textbooks could reach this standard.'

The Practitioner

'Dr. Hughes, head of the department of rheumatology at Hammersmith Hospital, has written a book which emphasises the high standard and experience of that department. . . . A copy should be in all rheumatology departments and medical libraries.'

The Lancet

Contents

Systemic lupus erythematosus
Sjögren's syndrome
Rheumatoid arthritis
Scleroderma
Polymyositis and dermatomyositis
Mixed connective tissue disease
Relapsing polychondritis
Polyarteritis nodosa
Wegener's granulomatosis
Takayasu's arteritis
Other vasculitides
Polymyalgia rheumatica and giant cell arteritis
Immune complex disease and the complement system
Immunological tests in the rheumatic diseases

The *Journal of Developmental Physiology* publishes papers describing the results of original research on any aspect (anatomical, biochemical, endocrine, pharmacological, physiological, etc) of the scientific study of the pregnancy, the foetus or the neonate of man or experimental animals. One of the major aims of the journal is to promote the communication of scientific information between individuals studying various aspects of development. Thus papers which clearly and succinctly report new observations and make their aims clear to scientists from a variety of disciplines are favoured. Papers will be considered on scientific merit alone and must report significant and carefully confirmed findings with full experimental details.

The journal will be published bi-monthly at about £30.00 (U.S.A. and Canada about \$70.00) per annum post free. Subscriptions and requests for specimen copies should be sent to the publishers at the following address

Histopathology

Edited by R.E. Cotton

Department of Pathology, City Hospital, Nottingham, England

Histopathology is an international journal designed for the publication of original histopathological material having clinical application in the study of human disease. It is designed to be of practical importance to the diagnostic histopathologist and to investigative workers in clinicopathological fields of study contributing to the better understanding of disease in man. It publishes critical and authoritative articles on current research relating directly to clinical disease including, where appropriate, electron microscopic, histochemical, immunological and supportive experimental studies. Review articles, significant collections of case material and analyses of technical innovations and concepts are also published occasionally. Shorter communications, book reviews, correspondence relating to articles appearing in previous issues and notices of forthcoming conferences are regular features of the journal.

The unprecedented success of this new journal within a year of its initial publication encourages the belief that it is meeting an important need among workers in the world's leading research centres.

Histopathology is published bi-monthly at £31.00 (U.K.), £37.50 (overseas), \$80.00 (U.S.A. and Canada) per annum post free. Subscriptions and requests for specimen copies should be sent to the publishers at the address below

Special Issues

A few copies of the following recent outstanding special issues are still in print and can be obtained from the publishers:

- 625. Prostaglandins
- 624. Perinatal infections
- 623. Chagas' disease and cardiomyopathy
Information needs of the prescribing physician
- 622. Bone dysplasias
- 614. Coronary artery surgery: critical appraisal
- 612. Steroids
- 611. Modern concepts of the prevention of infection
- 609. Ischaemic heart disease—prospects for prevention
- 608. Influenza vaccines
- 606. The obstructed bronchus
- 603. Symposium on sleep
- 602. Travel. Is it safe?
- 601. Lead Symposium
- 600. Objectivity in histopathology

A valuable new pocketbook

Clinical Chemistry Companion

A.M. Bold and P. Wilding
*Clinical Chemistry Department, Queen Elizabeth
Hospital, Birmingham*

This useful little book is designed to assist doctors, students and nurses in the efficient use of the clinical chemistry laboratory. It provides guidance on the collection and preservation of specimens together with details of simple 'side-room' tests and special investigations. It also includes conversion scales for S.I. units and conventional units for the most commonly requested tests.

Contents: Introduction; S.I. units; Reference intervals (normal values); Tests on blood, serum or plasma; Tests on C.S.F.; Tests on urine; Tests on faeces; Enzymes in serum; S.I. units conversion factors and reference (normal intervals for non-routine tests; Storage and transport of blood and urine specimens; 'Side-room' methods; Special tests procedures in clinical chemistry.

1978. 124 pages. Paper, £3.75 net

Blackwell Scientific Publications

The official journal of
The Dutch Ear, Nose and Throat Society
and of the Politzer Society

Clinical Otolaryngology and Allied Sciences

Edited by P.M. Stell
Liverpool Ear, Nose and Throat Infirmary, England

This European journal is designed for practising otorhinolaryngologists and specialists in related fields. Its aim is to reflect the clinical practice of the specialty by the publication of original papers, review articles and correspondence on all its aspects, including audiology, speech pathology, head and neck oncology and head and neck plastic and reconstructive surgery. A special feature is the publication in each issue of one or two signed leading articles by internationally-recognised authorities on topics of current interest.

The highest scientific standards are required of work submitted for publication and these are matched by the speed and quality of production which the journal provides.

Clinical Otolaryngology is published quarterly at £22.50 (U.K.), £27.00 (overseas), \$60.00 (U.S.A. and Canada) per annum post free. Subscriptions and requests for specimen copies of the journal should be sent to the publishers at the following address
