EDITORIAL REPRESENTATIVES FOR AUSTRALIA

J. R. Lawrence

EDITORIAL ASSISTANT

Mrs J. M. Coops

The Fellowship of Postgraduate Medicine was founded by a group of London consultants after the First World War to assist postgraduates, particularly those coming to London from the Commonwealth, to pursue their studies. The Fellowship first published the *Postgraduate Medical Journal* to give information about lectures, conferences and courses and to provide a monthly review of all branches of medicine.

*Postgraduate Medical Journal* publishes original papers on subjects of current clinical importance and welcomes review articles with extensive, up-to-date bibliographies as guides to further reading. Several symposia are published each year, each devoted to a single subject and written by specialists in different disciplines. Most issues include authoritative Current Surveys of clinical problems, and well documented Reports of cases of particular interest, and Book Reviews.

A 'Notice to Contributors' is published on the inside back cover of this issue. The Editor reserves the right to make changes which may clarify or condense papers where this is considered desirable.

The Journal is covered by *Current Contents*, *Biological Abstracts*, *ASCA*, *ISI/BIOMED* and *Science Citation Index*.

## EDITORIAL MATTERS

All editorial correspondence, including books for review and reprint orders, should be addressed to The Editor, The Postgraduate Medical Journal, Chandos House, 2 Queen Anne Street, London W1M 9LE (Tel. 01-580 3210).

## ADVERTISEMENTS

Advertisement enquiries and bookings should be addressed to Blackwell Scientific Publications Ltd, Osney Mead, Oxford OX2 0EL.

## SUBSCRIPTION INFORMATION

*Postgraduate Medical Journal* is published monthly for the Fellowship of Postgraduate Medicine by Blackwell Scientific Publications Ltd. The subscription price for 1984 is £60.00 (U.K.), £72.00 (overseas), \$142.50 (U.S.A. & Canada) post free. Subscribers in the U.S.A. and Canada should send their orders to Lippincott/Harper, Journal Division, 2350 Virginia Avenue, Hagerstown, Maryland 21740, U.S.A. The price of single issues is £6.00 (\$11.70), postage extra. If payments are made by bank transfer, all charges shall be at the remitter's expense. Copies of the journal are dispatched by air freight to New York for forwarding by surface mail throughout North and South America, and by air freight to Singapore for forwarding by surface mail to subscribers in India, Australasia and the Far East. U.S. Mailing Agent: Expeditors of the Printed Word Ltd, 527 Madison Ave, Suite 1217, New York, NY 10022. Second class postage paid at New York, NY. Postmaster: send address corrections to *Postgraduate Medical Journal*, c/o Expeditors of the Printed Word Ltd., 527 Madison Avenue, New York, NY 10022 (US mailing agent). Orders and business correspondence should be addressed to Blackwell Scientific Publications Ltd, Osney Mead, Oxford OX2 0EL (Telephone Oxford 240201).

## COPYRIGHT AND PHOTOCOPYING

Authorization to photocopy items for internal or personal use, or the internal or personal use of specific clients, is granted by The Fellowship of Postgraduate Medicine for libraries and other users registered with the Copyright Clearance Center (CCC) Transactional Reporting Service, provided that the base fee of \$02.00 per copy is paid directly to CCC, 21 Congress Street, Salem, MA 01970, U.S.A. Special requests should be addressed to the Editor. 0032-5473/84 \$02.00.

## Books received

*How to Live with Diabetes.* By HENRY DOLGER and BERNARD SEEMAN. British edition revised and adapted by Colin McIntosh. Pp. 176. Penguin Books, Harmondsworth, New York, Victoria, Markham (Ontario), Auckland, 1984. £2.50.

*Paediatric Neurology.* Edited by EDWARD M. BRETT. Pp. x + 613, illustrated. Churchill Livingstone, Edinburgh, London, Melbourne, New York, 1983. £45.00.

## Book reviews

### Annual Review of Public Health. Vol. 4

Edited by LESTER BRESLOW, JONATHAN E. FIELDING. (Associate Editor) and LESTER B. LAVE (Associate Editor). Pp. 424, illustrated. Annual Reviews Inc., 4139 El Camino Way, Palo Alto, California 94306, U.S.A., 1983. \$27.00 (U.S.A.), \$30.00 (elsewhere). Prices include postage and handling.

The chapters in this book cover an immense range of subjects from the design of longitudinal studies through to biological monitoring by way of the care of the mentally ill, the involvement of children in their own health, and lessons to be learned from health care regulation. There are, in addition, chapters on aspects of the indoor and outdoor environment, the treatment of hypertension by non-pharmacologic (sic) methods and the control of schistosomiasis. Perhaps it should be added, that none of the two dozen or so authors is British although three work elsewhere in Europe. Thus, the book is very much directed towards public health care in North America which severely limits its interest to British readers.

The chapter by Lebowitz on the health effects of indoor pollutants was one at which I looked with particular interest since we are now seeing a substantial number of patients who are thought to be suffering from 'building sickness' which, in some cases, is thought to be related to exposure to low levels of formaldehyde released from insulating foam. It was a disappointing read, however, since the review is superficial and the author fobs his readers off by saying that 'the effects of indoor pollution on health obviously require further epidemiological studies'. This is not helpful to those who wish to have a little guidance now!

The last few chapters of the book are brought together to form a section entitled 'Some recent events in biological monitoring' and a curious collection it is. The subjects which are dealt with include monitoring for cadmium, mercury, pesticides, mutagens, and electrophilic compounds, respiratory assessment, the application of cytogenetic methods and the monitoring of DNA adducts for the detection of carcinogens. All eight chapters are far too short to be useful and in none is there any indication of how the methods which are described may best be used to monitor populations exposed to potentially toxic substances; there is nothing which will help the reader to interpret the results which might be obtained nor any indication of action levels.

The quality of the writing is patchy, as one has come to expect from a multi-authored tome, and I would be reluctant to persuade anyone that it was worth parting with £30 for.

H. A. WALDRON,  
London School of Hygiene and Tropical Medicine,  
London WC1.

### Bailey and Bishop's Notable Names in Medicine and Surgery

4th edn. Revised by Harold Ellis. Pp. xvi + 272, illustrated. H. K. Lewis, London, 1983. £15.00.

Professor Ellis has provided a long overdue revision of this popular book, retaining the improved format of the 1959 edition with its useful footnotes, but updating references, substituting improved diagrams and illustrations, augmenting bibliographic details and arranging its contents alphabetically.

The changing character of clinical practice is reflected in the omission of Scott's dressing, Higginson's syringe, Potain's aspirator,

Southey's tubes and the expectant treatment recommended by Oschner and Sherren for late cases of perforated appendix. In their place, we are given intimate and informative vignettes of Billroth, the innovative genius; Cushing, the artist and perfectionist; Kocher, the serene inventor; Lane, the meticulous technician and Lister, pioneer of modern surgery.

In a work of this size, selection of appropriate subjects is obviously a problem and the 4th edition continues to display the surgical bias of its editors to the exclusion of such medical conditions as brucellosis, Korsakow's syndrome, Parkinson's disease, Fallot's tetrad, Stokes-Adams attacks and Burkitt's lymphoma. Von Willebrand's disease has a claim to be included and Trousseau has signs relating both to vascular and neurological disorders, while Crohn's disease and Buerger's disease are of equal interest to physicians and surgeons. With its information now presented in more attractive form, this is such a useful book that its publishers might profitably consider extending its scope.

JAMES WATT,  
Royal Society of Medicine,  
London W1M 8AE.

### Clinical Radiology.

4th edn. By G. SIMON AND A. J. A. WIGHTMAN. Pp. 311, illustrated. Butterworths, London, Boston, 1983. £27.50.

The previous editions of this book were known as *X-ray Diagnosis for Clinical Students* and many of us thereby first became stimulated in radiodiagnosis by the pen of the late George Simon. The renamed current edition has been expanded with the intention of not only providing basic instruction for undergraduates but also to help preparation for the higher qualifications in medicine and surgery.

Much new material has been included, especially concerning the new modalities of investigation, such as ultrasound and computed tomography. The book is well illustrated. Common and important diseases and differential diagnoses are discussed. Emphasis is placed upon choosing the correct order of investigation in relation to a given problem.

In a recent review of undergraduate radiology books, the Editor of Clinical Radiology did not consider this volume. It was a pity as it remains a very sound introduction, although as judged by his 'price per page' rather more expensive than some of its competitors. Medical schools do however have libraries. For postgraduates the book in its expanded form will provide a sound grounding for clinical practice as well as the higher exams.

D. G. SHAW,  
University College Hospital,  
London WC1E 6AU.

### Electrodiagnosis in Diseases of Nerve and Muscle: Principles and Practice

By JUN KIMURA. Pp. xx + 672, illustrated. F. A. Davis, Philadelphia, 1983. \$81.25.

This must be the most comprehensive work on electromyography and nerve conduction studies yet published. Running to 672 pages, printed on very high quality paper, it is a substantial volume both in weight and contents. The central part of the book covers in detail the

## Postgraduate Medical Journal: Notice to Contributors

**Typescripts.** Two complete copies should be sent to the Editor, Postgraduate Medical Journal, Chandos House, 2 Queen Anne Street, London W1M 9LE. Papers should be typewritten on one side of the paper only, with a 1½ inch margin, and the lines should be double spaced. The paper should bear the name of the author(s) with their degrees and the name of the laboratory or research institute where the work has been carried out. The full address of the principal author should be given as a footnote.

**The principal author must ensure** that any co-authors listed agree to submission of the typescript. Any written or illustrative material which has been or will be published elsewhere must be duly acknowledged and accompanied by the written consent of the authors and publishers concerned.

**Arrangements.** Papers should be divided into: (a) Summary; (b) Introduction; (c) Materials and methods; (d) Results; (e) Discussion; (f) Acknowledgments; (g) References. Key words, not more than five, should be supplied. [Key words should be medical subject headings (as in Index Medicus) that cover concepts in the paper *not* included in the title].

**References in the text.** These should be made by giving the author's surname, with the year of publication in parentheses. When reference is made to a work by three authors all names should be given when cited for the first time, and thereafter only the first name, adding *et al.*, e.g. Smith *et al.* (1958). The '*et al.*' form should always be used for works by four or more authors. If several papers by the same author and from the same year are cited, a, b, c, etc., should be put after the year of publication, Smith *et al.* (1958a).

**All references should be brought together at the end of the paper in alphabetical order** giving (a) name(s) of all the author(s) "*et al.*" not acceptable here; (b) year of publication in parentheses; (c) title of paper in its original form; (d) title of journal in full, underlined; (e) volume number, underlined; number of first page of article. References to books and monographs should include (a) name(s) and initials of all author(s) or editor(s); year of publication in parentheses, (b) title, underlined; (c) edition; (d) page referred to; (e) publisher; (f) place. *Authors should ensure that the listed references correspond exactly to those in the text.* Authors are responsible for the accuracy of their references.

**Standard usage.** The *Concise Oxford English Dictionary* is used as a reference for all spelling and hyphenation. Verbs which contain the suffix -ize (-ise) and their derivatives should be spelt with the z. Statistics and measurements should always be given in figures, i.e. 10 min, 20 hr, 5 ml, except where the number begins the sentence. SI units should be used wherever possible.

**Figures.** In the text Arabic numbers, e.g. Fig. 3, should be used. They should be marked on the backs with the name(s) of the author(s) and the title of the paper. The top of each figure should be indicated with an arrow on the reverse side. Each figure must bear a reference corresponding to a similar number in the text. Photographs and photomicrographs should be unmounted glossy prints and should not be retouched. Line diagrams should be on separate sheets; they should be drawn with black Indian ink on white paper and should be twice the size of the final reproduction. The originals of line diagrams, prepared as described above, may be submitted in photographs of similar size. The legends of all figures should be typed together on a single sheet of paper headed 'Captions to Figures'.

**Tables.** These should be on separate sheets. The main heading should be in capitals with an arabic number, e.g. TABLE 2. Each table must have a caption.

**Page proofs** will be submitted to the senior author for minor corrections and should be returned to the Editor within 3 days. Major alterations to the text cannot be accepted.

**Offprints.** These may be purchased if ordered on the form which will be sent to the senior author with the proofs.
