# Pharmaceutical Medicine

Editor Dr R. N. Smith  
Assistant Editor P. J. Keen

... "a quarterly journal, which includes papers on the validation of new and established methods of testing drugs in man written by investigators both inside and outside the pharmaceutical industry. It also provides a forum for the exchange of ideas about issues affecting drug development. These new developments merit support from all involved in the management, sale and use of drugs." *Lancet*

## DECISION MAKING IN GENERAL PRACTICE

Edited by **Michael Sheldon**, Department of Community Health, Queen's Medical Centre, Nottingham, **John Brooke**, Digital Equipment Company, Reading and **Alan Rector**, Medical Computation Unit, Manchester Royal Infirmary.

The book is based on a workshop held at Queen's Medical Centre, Nottingham and considers the problems of decision-making in the consultation as applied to general practice. The main areas of focus are: (i) needs of the undergraduate and vocational training in general practice for the future; and (ii) the introduction of computers into the consultation with reference to expert systems and decision support systems.

**Decision Making in General Practice** will be of value to instructors and educationalists in general practice as well as to all GPs, particularly those interested in computers in general practice.

The contents cover: *The Consultation; Models of Decision Making; Diagnosis; Management in the Consultation; Experience and Current Research; Methodology for Studying Decision Making Process; Implications for Education, Decision Support Systems and General Practice.*

**208pp**    **234 x 156 mm**    **£25.00**

# MACMILLAN PRESS FOR TITLES ON PREGNANCY AND PAEDIATRICS

## PREGNANT WOMEN AT WORK

*Edited by Geoffrey Chamberlain*

The problems facing working pregnant women are extremely diverse. This book draws together contributions from experts in a variety of disciplines not usually found in one volume.

It consists of a series of authoritative accounts of the various effects of working while pregnant – both in the workplace and in the home, and highlights the varying work habits of pregnant women in different countries.

The technical hazards of radiation and chemicals are considered, but wider medico-sociological aspects are given coverage along with legal, trade union, and management viewpoints.

## BIRTH DEFECTS COMPENDIUM

*Edited by Daniel Bergsma*

This compendium contains comprehensive information on 1,005 birth defects contributed by health authorities from 24 countries. In addition the compendium contains 3,000 references to relevant literature and 500 illustrations. The combination of text and illustration will enable diagnostic criteria, clinical features, treatment, prognosis and recurrence risk to be more easily ascertained.

**1222pp**    **£50.00**    **0 333 27867 3**

## PREGNANCY CARE IN THE 1980s

*Edited by Luke Zander and  
Geoffrey Chamberlain*

Current practice and future trends in pregnancy are controversial subjects. This book considers the different aspects of pregnancy and its management from a wide range of different views. It is very much a critical appraisal of current practices, expected objectives and future expectations. Some of the questions asked include: what should be the content of antenatal care? How do bonding processes relate to obstetric practices? How should preparation for parenthood be directed? and what changes are expected in the coming decade? Bringing together, as it does, a wide variety of different professional views, this book will be valuable to all those involved in this vital aspect of medical care.

## ENCYCLOPEDIA OF MEDICAL HISTORY

by Roderick McGrew

The **Encyclopedia of Medical History** is the first general reference book on the history of medicine for decades. This book traces the histories of physiology, neurology, gynaecology, surgery, psychology, radiology and other areas of specialisation from their earliest beginnings to the present day.

*Professor McGrew*, in describing specific diseases, discusses the consequences of the diseases on social groups and structure in relation to public health, institutional development and economic growth. Also covered in detail are: human physiotherapy, bacteriology, instruments, medications, procedures, concepts, popular medicine, schools, hospitals and clinics and public health.

400pp 1985 0 333 28802 5 £25.00

## THE DEVELOPMENT OF A MEDICINE

by R. B. Smith

There is increasing public interest in the development and testing of medicines, following notable cases of drugs being withdrawn because of harmful side-effects. **The Development of a Medicine** places the discovery and development of medicines in its historical context and then explains the extremely complex and lengthy process by which a drug or medicine is developed from the laboratory bench to availability for prescription by the physician.

This is a highly readable account of an area which is of vital interest to the medical profession and the public alike.

## THE MANAGEMENT OF AIDS PATIENTS

David MILLER, Jonathan WEBER and John GREEN

**David Miller** is a Clinical Psychologist at St Mary's Hospital in London. **Jonathan Weber** is a Wellcome Research Fellow in the Jefferis Research Wing at St Mary's Hospital. **John Green** is a District Clinical Psychologist at St Mary's Hospital.

Publication: January 1986 200pp

hardcover 0 333 40465 3 £30.00 paperback 0 333 40466 1 £10.95

- ◆ Urgently required information for health-care professionals everywhere
- ◆ This book cuts through the sensational aspects of the disease to give solid advice and information to those involved in patient care
- ◆ The editors and many of the contributors come from St Mary's Hospital, London one of the foremost centres in Britain for the treatment of AIDS patients
- ◆ All the chapters are written from a problem orientation, emphasising practical, clinical approaches to clinical problems.

**The Management of AIDS Patients provides essential management information for all professional groups likely to be involved with AIDS patients.**
