

UNIVERSITY OF NOTTINGHAM DEPARTMENT OF COMMUNITY MEDICINE AND EPIDEMIOLOGY

SHORT COURSES IN EPIDEMIOLOGY

These three non-residential courses are of increasing difficulty and are designed for all health professionals including physicians, nurses, scientists, managers and all who are interested in the application of epidemiological methods to their own field. Epidemiology I assumes no previous knowledge. Each course can be taken separately.

| | | | |
|--------|------------------|---------------------|------------------|
| Dates: | Epidemiology I | 20-22 November 1989 | Course fee: £150 |
| | Epidemiology II | 19-21 March 1990 | Course fee: £150 |
| | Epidemiology III | 22-23 March 1990 | Course fee: £100 |

If you would like advance details of this course, please contact:

Mrs Alison Langham, Dept. of Community Medicine and Epidemiology, Queen's Medical Centre, Nottingham NG7 2UH. Tel: Nottingham (0602) 709310 (direct line)

NEW FROM MACMILLAN

Radiology of Facial Injuries

SECOND EDITION
Volume I

Edited by Kenneth D. Dolan, M.D.,
Charles G. Jacoby, M.D.
and Wendy R.K. Smoker, M.D.

0-02-329941-X
1988 • 103 pages • £42.00

This highly illustrated atlas provides a comprehensive look at the radiological elements of facial injury, as well as guidelines for diagnosis of traumatic injuries of the face and neck. Anatomic and pathologic background to evaluate facial injuries is provided, as well as new information on CT correlative views and concepts.

An Atlas of Brachytherapy

*Principles, Techniques,
and Clinical Applications*

Basil S. Hilaris, M.D.,
Dattatreyyudu Noir, M.D.
and Lowell L. Anderson, Ph.D.

0-02-354770-7
1988 • 326 pages • £56.00

Extensively illustrated, this book covers all aspects of brachytherapy in a unique format. Textual material is placed adjacent to illustrations and it provides a quick and easy reference to the practical management of malignant diseases.

Nuclear Diagnostic Imaging

*Practical Clinical
Applications*

E. Edmund Kim, M.D. and
Thomas P. Haynie, M.D.

0-02-363750-1
1987 • 502 pages • £55.00

In this practical, clinically oriented reference, emphasis is on state-of-the-art scintigraphic techniques. It covers their principles, their applications in clinical problem-solving, and their correlation with other diagnostic modalities used in clinical medicine.

Journal of Human

HYPERTENSION

Editor DG Beevers

*Department of Medicine, Dudley Road Hospital
Birmingham B18 7QH, UK*

USA Co—Editor Franz Messerli
Ochsner Clinic, USA

This journal is exclusively concerned with the clinical aspects of human hypertension. Our understanding of the cause, as well as the detection, investigation and treatment of this disease remains inadequate. The journal aims to perform the dual role of increasing knowledge in the field of high blood pressure as well as improving the standard of care of patients. Practising clinicians, general practitioners, research workers, and nurses, as well as epidemiologists should find it of interest.

MORTALITY, MORBIDITY and HEALTH STATISTICS

by Michael Alderson

Michael Alderson, who sadly died in 1988, was probably the best-known medical statistician in the UK. His position as Chief Medical Officer at the OPCS placed him at the apex of the UK government health statistics gathering and reporting system. This new book represents a distillation of his lifetime of experience in epidemiology. It is the definitive guide to international medical statistics both for those who use them and for those who generate them.

Contents

- Introduction to Medical Statistics
- Mortality
- Legal Abortions
- Cancer
- Congenital Malformations
- Hospital Discharge
- Infectious Diseases
- Morbidity treated in General Practice
- Sickness Absence and Occupational Disease
- Health Surveys at National Level
- Monitoring the Public Health
- References, Index

Each of the areas discussed in the above chapters is examined under the following headings: primary information source, validity, statistical techniques, presentation, publications (worldwide), and uses.

December 1988
Hardback

520pp

The Influence of New Technology on Medical Practice

Edited by J P Paul, A B McCrudden and P W Schuetz

The sixth in a series of volumes reporting the proceedings of the Strathclyde International Seminars on Bioengineering, organised by the Bioengineering Unit at the University of Strathclyde, Scotland.

In 40 chapters, this volume explores a range of research programmes being conducted in the United Kingdom and Austria relating to the utilisation of recent developments in instrumentation and analysis, and their application to current medical practice.

The contributions cover important developments in:-

- Bioengineering education
- Research in biomechanics
- Artificial organs
- New technologies for diagnosis and therapy

Contents include:-

Modelling of muscle mechanics in the normal and the disabled *J P Paul.*

Image analysis: Uses and abuses *S P Barton.*

Artificial liver support systems: Design of preclinical evaluation programmes *C J Ryan, M Aslam, J Cohen and J M Courtney*

Novel approaches to blood purification *E Behm, D Falkenhagen, H Klinkmann and J M Courtney.*

Clinical applications of lasers-selective absorption

J H Evans, W H Reid, H S Gouw, C A Vance, J H Newstead and M Sobey.

Blood flow measurements with ultrasonic techniques:

Experiences with a novel multichannel diagnostic method using hard wired fast Fourier transformation

P Plundner and A Stadler.

Isolated cells as experimental models *R H Burdon.*

Dynamic EEG mapping: A new method in brain research *G Plurtscheller.*

The use of monoclonal antibodies in the food industry and agriculture *A A Candlish, J E Smith, W H Simeon and I A Goodbrand.*

Monoclonal antibodies for drug targeting in cancer therapy *R W Baldwin and V S Byers.*

November 1988 292pp 234x157mm Hardback £72.00 0333 444213

The Long-Term Complications of Therapy for Cancer in Childhood and Adolescence

by Daniel Green, Department of Paediatrics,
Roswell Park Memorial Institute, Buffalo, USA

Recent improvements in prognosis have produced an increasing population of long-term survivors of childhood cancer, whose problems have only recently received the attention of clinical investigators.

This book provides paediatric and medical oncologists, paediatricians and internists with a detailed description of the recognised long-term complications, a discussion of factors that are known or suspected to increase the risk or severity of a particular complication, and recommendations for monitoring patients at increased risk of a particular complication.

Contents Introduction / The Central and Peripheral Nervous Systems / Vision and Hearing / Teeth and Salivary Glands / The Cardiovascular and Pulmonary Systems / The Musculoskeletal System / The Thyroid Gland / Liver and Intestine / Kidney and Bladder / Gonadal Function and Reproduction / Second Malignant Tumours / Psychosocial Complications / Appendix / Index

May 1989 £30.00 208pp 234 x156mm 0-333-49794-5
