

ANNOUNCING A MAJOR NEW WORK FROM STOCKTON PRESS. . .

General & Applied Toxicology

EDITED BY

Bryan Ballantyne • Timothy C. Marrs • Paul Turner

December 1993 • 2 Volumes • 1,456 Pages

General and Applied Toxicology provides a comprehensive review of the scientific basis of toxicology and its application. It covers both general and specialized areas, with particular reference to basic principles, definitions, laboratory aspects including the use of animal alternatives, interpretation of data, and practical applications of toxicology.

There are sections devoted to fundamental concepts, techniques, toxicity by specific routes of exposure and by organ systems, specialist aspects of toxicology, and the increasingly important area of regulatory toxicology.

Over 80 experts from around the world have contributed these chapters, specifically for this book, insuring the information is current and of the highest quality.

General and Applied Toxicology will prove an invaluable addition to libraries, universities, medical schools and research institutions. It will form the basis for coursework for those working toward a first or higher degree in toxicology or a related subject. It will also be useful as a text for individuals proceeding to certification in general or specialist aspects of toxicology, such as diploma status from the Royal College of Pathologists, The Institute of Biology, or the American Boards for general toxicology, applied toxicology, medical toxicology, industrial hygiene, occupational medicine, or veterinary toxicology.

- Over 80 contributors
- Two-volume set each volume containing a complete subject index
- Approximately 1,600 printed pages in a large double-column format for clarity and accessibility
- Comprehensive and up-to-date coverage
- Extensive cross referencing system links all related chapters
- Sixty-seven chapters written by leading toxicologists from around the world
- 295 figures and 260 tables
